MATHEW KOGO

CLOUD & DEVOPS ENGINEER | CLOUD OPERATIONS | SITE RELIABILITY

Columbus, OH • kogomathew2023@gmail.com • +1(515) 346-5449 • Linkedin Profile

PROFESSIONAL SUMMARY

Cloud and infrastructure professional with experience in application delivery, Linux-hosted services, CI/CD workflows, production troubleshooting and technical documentation, alongside current work on a hyperscale data-center build. Has maintained Jenkins pipelines, deployed applications to Linux VPS environments, investigated application and database performance issues, and supported repeatable release practices. Brings an operations-first approach to testing, change control, traceability, incident escalation and safe execution. AWS-certified, with a focus on cloud engineering and site reliability.

ENGINEERING STRENGTHS

Application Deployment & Release Support • Linux Operations • CI/CD Maintenance • Containerized Applications • Troubleshooting & Root-Cause Investigation • Networking & TLS • Monitoring & Log Review • Automation • Runbooks & Change Records • Cross-team Coordination

PROFESSIONAL EXPERIENCE

Fiber Installer | E2 Optics (Meta Data Center)

New Albany, OH | Aug 2026 - Present

- Install, route and terminate structured fiber and copper cabling and patch panels in a hyperscale data-center build, following engineering prints and approved work instructions.
- Perform continuity and certification tests and check results before work is presented for acceptance.
- Maintain cable labels, test records and work documentation so changes remain traceable for audits, maintenance and future troubleshooting.
- Investigate cabling, rack and connectivity issues, capture findings and escalate unresolved faults with clear status updates.
- Coordinate work with site teams to keep implementation aligned with engineering requirements, dependencies and quality expectations.
- Follow controlled procedures when working around mission-critical infrastructure, validating completed work rather than relying on assumptions.
- Prepare clear handoff notes covering completed tasks, outstanding issues and next actions for other technicians and leads.
- Apply disciplined operational practices verify changes, record outcomes, communicate risk early and complete required checks before closing work.

Software Engineer | Webspec Design, Think Future Technologies, PRIMETECH

Jan 2020 - Aug 2023

- Built and maintained Jenkins CI/CD pipelines to standardize application build and deployment steps and support repeatable releases to Linux VPS environments.
- Deployed applications to Linux-hosted environments and investigated failed releases, configuration mismatches, startup issues and runtime errors.
- Used command-line checks and application logs to narrow down service, environment and connectivity problems during deployment and support.
- Investigated slow application behavior by tracing database queries and code paths, then implemented fixes based on the findings.
- Worked with engineering colleagues to coordinate releases, communicate deployment status and resolve issues found during production support.
- Created troubleshooting guides and technical documentation covering setup requirements, common failures and recovery steps for handoffs.
- Maintained pipeline and deployment configuration to make recurring delivery tasks more consistent and easier for the team to follow.
- Used a structured troubleshooting approach: reproduce the issue, inspect logs and configuration, isolate the cause, apply a fix and verify the result.

SELECTED PROJECTS

Self-Hosted Application Platform | Operate containerized Next.js and FastAPI applications on a self-managed Linux VPS, handling deployments, reverse-proxy routing, TLS configuration and command-line troubleshooting.

Market Data Pipeline | Built a Python workflow that retrieves market data from an external API, processes it and passes it to a machine-learning model.

VoIP Calling Application | Built a mobile calling application with dialpad, contacts, call history and recording using a third-party real-time communications SDK.

TECHNICAL SKILLS

Cloud: AWS (EC2, S3, VPC, IAM, Lambda, CloudWatch), Microsoft Azure
CI/CD & Version Control: Jenkins, Azure DevOps, GitLab CI/CD, Git, GitHub, YAML pipelines
Containers & Orchestration: Docker, Docker Compose, Kubernetes, Helm
Infrastructure Automation: Terraform, OpenTofu, declarative configuration and GitOps concepts
Linux & Networking: Linux administration, SSH, system services, logs, DNS, Nginx, Traefik, reverse proxy, TLS/SSL
Monitoring & Operations: Prometheus, Grafana, CloudWatch, Azure Monitor, log review, alert triage and incident documentation
Application & Data: Python, FastAPI, Next.js, JavaScript/TypeScript, Prisma, SQL/database fundamentals, PostgreSQL, Java and Go concepts
Other: Flutter, Swift, technical runbooks, change records, deployment documentation and team handoffs

CERTIFICATIONS

- AWS Certified Solutions Architect - Associate
- AWS Certified Cloud Practitioner
- OSHA 10-Hour Construction Safety
- Data Center Fiber Installer Pathway — American Workforce Academy (Meta), Aug 2026

EDUCATION

Master of Science, Computer Science (Computing Systems) | Georgia Institute of Technology | Expected Dec 2026

Bachelor of Science, Computer Science | Moi University | 2019

WORKING APPROACH

Prioritizes repeatable deployment steps, evidence-based troubleshooting, validation after changes, accurate records and clear handoffs. Works collaboratively across technical teams and escalates risks early when an issue affects quality, delivery or service reliability.
