MATHEW KOGO

CLOUD & DEVOPS ENGINEER | CLOUD OPERATIONS | SITE RELIABILITY

Columbus, OH • kogomathew2023@gmail.com • (515) 346-5449 • linkedin.com/in/mathew-kogo

PROFESSIONAL SUMMARY

Cloud and DevOps professional with consulting experience 4+ years supporting cloud-hosted applications, Linux environments, release workflows, deployment troubleshooting and operational documentation. Experienced in coordinating delivery with engineering teams, investigating service issues, validating changes and improving repeatability of deployments. Earlier software engineering work includes Jenkins pipeline maintenance and Linux VPS deployments, complemented by current work on a hyperscale data-center build. AWS-certified, with an operations-first focus on service reliability, controlled change and clear technical handoffs.

ENGINEERING STRENGTHS

Cloud & Platform Operations • Release Planning & Deployment Support • CI/CD Process Improvement • Linux Service Operations • Incident Investigation & Recovery • Environment Consistency • Monitoring & Log Analysis • Change Validation • Runbooks & Documentation • Client & Team Coordination

PROFESSIONAL EXPERIENCE

Fiber Installer | E2 Optics (Meta Data Center)

New Albany, OH | Aug 2026 - Present

- Install and terminate fiber/copper cabling and patch panels in a hyperscale data center, following engineering prints and approved work instructions.
- Perform continuity and certification tests and document results for acceptance.
- Maintain labels and test records for traceability, maintenance and troubleshooting.
- Investigate cabling and connectivity issues and escalate unresolved faults with clear findings.
- Coordinate with site teams to meet engineering requirements, dependencies and quality standards.

Cloud & DevOps Consultant | Enthrallix

Sep 2023 - Jul 2026

- Built and maintained Azure DevOps and GitLab CI/CD workflows to automate builds, tests, artifact handling and releases across development, staging and production.
- Supported Azure and AWS environments, including compute, networking, storage, identity/access configuration, environment setup and cloud troubleshooting.
- Coordinated production releases with engineering and clients; checked prerequisites, validated application health after rollout and documented rollback steps.
- Managed pipeline variables, service connections, environment approvals and deployment permissions; helped protect credentials and secrets in delivery workflows.
- Reviewed dashboards, logs and alerts across cloud monitoring tools; investigated service degradation and escalated incidents with actionable evidence.
- Resolved production issues involving startup failures, connectivity, configuration drift, resource constraints and deployments; verified recovery after fixes.
- Supported DevSecOps controls including least-privilege access, vulnerability remediation, secure configuration checks and pipeline security gates.
- Supported container deployments, image/version management, health checks and runtime troubleshooting with developers.
- Supported MLOps-oriented workflows for repeatable data/ML component execution and deployment, environment configuration, artifact traceability and post-release validation.

- Maintained release notes, runbooks, incident records and deployment checklists; communicated risks, dependencies and status to stakeholders.
- Supported repeatable infrastructure provisioning and environment consistency through version-controlled definitions and reviewed changes.

Software Engineer | Webspec Design, Think Future Technologies, PRIMETECH

Jan 2020 - Aug 2023

- Maintained Jenkins CI/CD pipelines for repeatable builds and deployments to Linux VPS environments.
- Deployed applications to Linux environments and troubleshot release, configuration, startup and runtime failures.
- Used command-line checks and logs to diagnose service, environment and connectivity issues.
- Traced database queries and code paths to investigate performance issues and implement fixes.
- Documented setup, troubleshooting and recovery steps to improve support handoffs.

SELECTED PROJECTS

Self-Hosted Application Platform | Operate containerized Next.js and FastAPI applications on a self-managed Linux VPS, handling deployments, reverse-proxy routing, TLS configuration and command-line troubleshooting.

Market Data Pipeline | Built a Python workflow that retrieves market data from an external API, processes it and passes it to a machine-learning model.

VoIP Calling Application | Built a mobile calling application with dialpad, contacts, call history and recording using a third-party real-time communications SDK.

TECHNICAL SKILLS

Cloud: AWS (EC2, S3, VPC, IAM, Lambda, CloudWatch), Microsoft Azure

CI/CD & Version Control: Jenkins, Azure DevOps, GitLab CI/CD, Git, GitHub, YAML pipelines

Containers & Orchestration: Docker, Docker Compose, Kubernetes, Helm

Infrastructure Automation: Terraform, OpenTofu, declarative configuration and GitOps concepts

Linux & Networking: Linux administration, SSH, system services, logs, DNS, Nginx, Traefik, reverse proxy, TLS/SSL

Monitoring & Operations: Prometheus, Grafana, CloudWatch, Azure Monitor, log review, alert triage and incident documentation

Application & Data: Python, FastAPI, Next.js, JavaScript/TypeScript, Prisma, SQL/database fundamentals, PostgreSQL, Java and Go concepts

Other: Flutter, Swift, technical runbooks, change records, deployment documentation and team handoffs

CERTIFICATIONS

- AWS Certified Solutions Architect - Associate
- AWS Certified Cloud Practitioner
- Data Center Fiber Installer Pathway - American Workforce Academy (Meta), Aug 2026

EDUCATION

Master of Science, Computer Science (Computing Systems) | Georgia Institute of Technology | Expected Dec 2026

Bachelor of Science, Computer Science | Moi University | 2019

WORKING APPROACH

Prioritizes repeatable deployment steps, evidence-based troubleshooting, validation after changes, accurate records and clear handoffs. Works collaboratively across technical teams and escalates risks early when an issue affects quality, delivery or service reliability.
